SUBJECT INDEX

ABLATION

of materials in low Earth-orbital environment, 1497

AIRGLOW

aeronomic problems and associated parameters, O_2 photodissociation, 1039, 1059, 1069

dayglow,
  OI 989 and 1173Å multiplets, 987
  OI 1304, 1356 and 1641 Å emission, thermospheric atomic oxygen abundance, 963

nightglow,
  images which evidence passage of gravity wave, thunderstorm source, 975
  oxygen and nitrogen, ionospheric F-region response to magnetic storm, 371
  oxygen bands, excitation and quenching, 875
  oxygen bands, transition probabilities, 869
  oxygen, ultra violet high resolution spectroscopy, 927
  OH Meinel bands, inferred mesospheric atomic oxygen, 897
  OI green line, 557-7nm excitation, 883
  OI green line, 557-7nm, identification of precursor, 1077
  OI green line, 557-7nm, F-region excitation, dissociative recombination of O_2^+, 621
  OI red line, 630 nm, non-thermal distribution of $O(^1D)$ atoms in ionosphere, 89
  OI red line, 630 nm, winds, Fabry-Perot measurements, 225
  O_2 infra red atmospheric system, rocket observations, 459
Ozone chemistry in thermosphere, implications for 557.7nm emission, 1077
spectrometer for nightglow, multi-channel, 1269
Visibile Airglow Experiment, a review, 21

ALFVÉN WAVES

see HYDROMAGNETIC, waves.

ANTARCTIC STRATOSPHERIC CHEMISTRY

complex model, implications for ozone, 73
OCIO, implications for bromine, 213

ASTRONOMY

amateur, space age, a review lecture, 1125

ATMOSPHERE, TERRESTRIAL

composition,
  aerodynamic effects on measurements from rockets in thermosphere, 921
  chemistry, stratospheric, Antarctic, 73
  density, thermospheric, mass spectrometer measurements, 281
  density, thermospheric, comparison of models at 285 km, 1121
  nitric-oxide, longitudinal asymmetric transport in E-region, 11
  nitric-oxide, structure of thermosphere, 271

oxygen, atomic, thermospheric, from auroral I(5577) / I(4278) emission ratio, 893
oxygen, atomic, thermospheric, from OI 1304, 1356 and 1441Å dayglow, 963
oxygen, atomic, thermospheric, models, 907
oxygen, atomic, thermospheric, observations of far IR, 531
oxygen, atomic, thermospheric, transport using global model, 935
oxygen, atomic, mesospheric, nightglow OH Meinel band emission, 897
ozone, in ancient oxygen-poor atmosphere, environmental implications, 1391
ozone, mesospheric and stratospheric, microwave measurements, 607
trace gases, absorption spectroscopy on Spacelab 1, 291
water vapour, stratosphere and mesosphere, microwave measurements, 607
motions
gravity wave, evidence in nightglow images, thunderstorm source, 975
tides, diurnal, in presence of mean winds and dissipation, 579
transport, thermospheric, of atomic oxygen, global model, 935
winds, thermospheric, F-P measurements at 6300Å, Antarctica, 225
winds, thermospheric, meridional, geomagnetic disturbed periods, 677
winds, thermospheric, meridional, geomagnetic quiet-time behaviour, 197
winds, thermospheric, neutral, auroral intensification, 851
winds, zonal, satellite orbit analysis, review, 1085
structure,
climate and biospheric environment in ancient oxygen-poor atmosphere, 1391
thermosphere, mid-latitude, behavioural model, 1
thermal phenomena,
cooling, CO_2 15 micron band, solar-cycle variations, 177
cooling, electron, rates in the ionosphere, 65
temperature, ion, in auroral F-region, 1295
temperature, ionospheric, around 600 km, 553
temperature, thermospheric, far IR observations, 531
temperature, thermospheric, geomagnetically disturbed periods, 677
temperature, thermospheric, mass spectrometer data, 281

AURORA
arc deformation, high time-resolution imaging at substorm onset, 715
arc, polar cap, during strong northward IMF, 1317
cusp width, correlation with AE (12) index and B_z, 157
diffuse, equatorward edge, categorization of dispersive curves, 1031
electron precipitation, see ELECTRONS, precipitation
emission ratio I(5577)/I(4278), thermospheric oxygen concentrations, 893
intensifications, role of F-region neutral wind, 851
occurrence, relationship to Yule analysis of sunspots, 99
polar cap, features in southern polar region, 429
quiet-time average configuration, electron precipitation, 791
radio, position, dependence on IMF and geomagnetic activity, 441
spectra, infrared, rocket borne interferometric measurement, 543

BEAM EXPERIMENTS

electron,
accelerator experiment from 'mother-daughter' rocket pair, ionospheric plasma, 1509
ECHO 6, nearby ELF electric turbulence, 235
pulsed, magnetic fields in vicinity, 469
rocket payload, plasma effects, 399

BOOK REVIEWS

'Astronomy and Astrophysics Abstracts, Vol 43'.
Ed. S. Bohme et al., Reviewer: S. Bradley, 630
'Magnetotail Physics' by A.T.Y. Lui; Reviewer, D.J. Southwood, 629
'Satellite Orbits in an Atmosphere: Theory and Applications' by D.King-Hele; Reviewer, A.E. Roy, 231
'The Physics of the Planets: Their Origin, Evolution and Structure', Ed. S.K. Runcorn, F.R.S.; Reviewer, J.W. Chamberlain, 1523

BROMINE
chemistry in Antarctica, 213

CARBON DIOXIDE
atmospheric radiation, 15 micron, solar-cyclic variations, 177

COMET
Giacobini-Zinner, water-group ions in surrounding pick-up region, 1429

COSMIC RAYS
anisotropies, radial and east-west, in heliosphere, 1451
interplanetary acceleration, evidence for the GLE of 4 August 1972, 539

COUPLINGS
solar wind-magnetosphere, ionospheric flows, effect of orientation of IMF, 471
thermosphere, mid-latitude, modelled irregular behaviour, 1

CURRENT SYSTEMS
B_y dependent, in southern polar region during positive B_z, 523
field-aligned, related to polar cap arcs during strong northward IMF, 1317
ionospheric, equivalent of low-latitude Pc3 pulsations, 641
ring currents, decay, influence of recovery phase injection, 765
see also MAGNETOSPHERE

ELECTRIC FIELD
equatorial zonal, and reversals in B_z component of IMF, 785
ionospheric conductivity, and currents associated with auroral substorms, 1359
ionospheric conductivity, ion mobility spectra, 163
thermospheric space charge distribution at high latitude, 1005
radar measurements during IPDP plasma wave event, 1103

ELECTRONS
acoustic double layer in current-carrying magnetised plasma, 1009
auroral, currents propagated by MHD Alfvén waves, 417
beams, see BEAM EXPERIMENTS
precipitation,
  auroral, quiet-time configuration, 791
  energy deposition in N_2 gas, 329
  energy (0.19 - 3.2 MeV), satellite observations, 591
  pitch angle distributions, 117
  signature of polar cusp and boundary layer, 1219
thermal, cooling rates in upper atmosphere, 65

GEOMAGNETIC ACTIVITY
forecasting, and proton showers, 205
forecasting, quantitative, 27-day recurrent activity, 1133
disturbed periods, thermospheric temperatures and meridional winds, 677
effect on position of radio aurorae in south polar region, 441
H-component, ground based data, and ionospheric sporadic-E, 1165
ionospheric F-region storms, studied by F-region nightglow observations, 371
polar cap, a new index, 1095
polar cusp width, correlation with AE(12) index and B_z, 157
positive bays, observational test for origin, 1149
see also MAGNETOSPHERE

GEOPOTENTIAL FIELD
see SPACECRAFT

GRAVITY WAVES
in nightglow emission images, thunderstorm source, 975

HARANG DISCONTINUITY
associated thermospheric winds in vicinity of, 225

HYDROMAGNETIC WAVES
Alfven,
  ion-cyclotron, scattering by drift waves in a collisional plasma, 499
  propagation of auroral electron currents, 417
  resonance effects, extended modelling, 411

torsional, in dipole and toroidal magnetosphere, 1461
turbulence at 900 km, 949
auroral hiss, propagation of, ground-based observations, 259
electron acoustic, 1009
electrostatic, improved approximation, model, 123
IPDP event, radar electric field measurements, 1103
pulsations,
CNA, accompanying waves at conjugate stations, 1255
Pc3, low latitude, ionospheric current systems, 641
Pc3-4, across the plasmapause, ionosonde observations, 733
transients and interplanetary shocks, solar origin, 301
ULF emissions
eigen periods within the plasmasphere, 185
short duration, ionospheric influence, 801
VLF emissions, (whistlers),
characteristics, from multicomponent e.m. field measurements, 1305
growth and damping in hot anisotropic plasma, 663
improved quasi-longitudinal approximation, 1111
propagation at low latitudes, longitudinal effect, 833
self-focussed duct propagation, non linear process, 655

INTERPLANETARY DUST
lifetime, dynamical effects of Jupiter, inner planets and Poynting-Robertson drag, 747

INTERPLANETARY MAGNETIC FIELD (IMF)
B_y dependent currents in polar region during positive B_z, 523
B_z component reversals and equatorial zonal electric field, 785
B_z component and AE index variations, monthly and yearly mean values, 829
disturbances on 1-4 April 1979, associated solar flares, 669
disturbance producing interplanetary scintillations, MHD model, 1155
effect on position of radio aurorae in south polar region, 441
north-south component, effect on dayside ionospheric flows, 471
north-south component, sudden changes, response time of ionosphere, 1415
magnetic clouds, geomagnetic response, 1485, 1489, 1495

IONOSPHERE
conductivity, electric field and currents associated with auroral substorms, 1359
conductivity, ion mobility spectra, 163
F-region, storm effects studied by nightglow observations, 371
high-latitude, dayside flows, dependence on north-south component of IMF, 471
high-latitude, response time to sudden change in north-south component of IMF, 1415
ions,
flows in dayside and nightside plasmasphere, 693
low energy, at low equatorial altitudes, 693
temperature, in auroral F region, 1295
plasma measurements, from electron accelerator experiment, 1509
positive bays, observational test for ionospheric origin, 1149
signature of plasma sheet thinning prior to substorm, 1285
space charge distribution in thermosphere, high latitude electric field, 1005
sporadic-E, ground-based H-component data, 1165
temperature structure at 600 km altitude, low latitude, 553

JUPITER
dynamical effect on lifetime of interplanetary dust, 747
magnetospheric diffusion, precipitation induced conductivity, 145

MAGNETOHYDRODYNAMICS
electron acoustic double layer in a current-carrying magnetised plasma, 1009
instability,
curvature-driven drift mirror, 383
in heat-conducting solar wind plasma, 775
Kelvin-Helmholtz, 687
proton cyclotron, cold ions and thermal anisotropy, 207
particle trapping at tangential discontinuity, multiple incidence, 1477
plasma expansion in polar wind, 753

plasma flow in heliospheric current sheet, 105
pulsations, see HYDROMAGNETIC WAVES
waves, see HYDROMAGNETIC WAVES

MAGNETOSPHERE
convection in polar cap arcs during strong northward IMF, 1317
coupling to solar wind, ionospheric flows, effect of IMF, 471
currents,
  B_y dependent, during positive B_z, 523
  field-aligned, and Volland electric field parameters, 631
  field-aligned, polar cap arcs during northward IMF, 1317
discontinuity, tangential, particle trapping, 1477
electric field,
  patterns and thermospheric charge distribution, 1005
  Volland model, associated current distribution, 631
energy dispersion at equatorial edge of diffuse aurora, 1031
flux-transfer events, 503
heliospheric current sheet structure, 105
ionospheric flows, high latitude, effect of magnetospheric erosion, 509
magnetic clouds, geomagnetic response to, 1485, 1489, 1495
plasmapause, Pc3-4 pulsations, ionosonde observations, 733
plasmasheet
  particle bursts, inverse velocity dispersion, 1181
  steady convection at 20 earth radii, 353
  thinning, ionospheric signature, pre-substorm, 1285
polar cap boundary, contracting, ion flows and heating, 1229
positive bays, observational test for magnetospheric origin, 1149
solar wind plasma, geomagnetic activity and proton showers, 205
storm,
  F-region, studied by means of nightglow emissions, 371
  recovery phase injection, influence on decay of ring current, 765
  sudden commencement, effectiveness of sporadic phenomena on the Sun, 1015
substorm,
  auroral, ionospheric conductivity, electric fields and currents, 1359
  onset, imaging of auroral arc deformation, 715
transients and interplanetary shocks, solar origin, 301

MARS
ozone, effects of clouds and airborne dust, 125

NITRIC OXIDE
role for thermospheric structure, zonally averaged model, 271
transport in the E-region, longitudinal asymmetry, 11

ORBIT ANALYSIS

SPACECRAFT

OXYGEN
abundance, see ATMOSPHERE, TERRESTRIAL, composition
airglow, see AIRGLOW
reactions, see REACTION KINETICS

OZONE
absorption cross-section at 238-335nm and temperature dependence, 395
Antarctic, and associated chemistry, 73
chemistry in thermosphere, implications for 557.7 nightglow emission, 1077
in ancient oxygen-poor atmosphere, climate and biospheric environment, 1391
Mars, effect of clouds and airborne dust, 125
microwave measurements from balloon in upper atmosphere, 607

PRECIPITATION
electrons, see ELECTRONS, precipitation
protons (0.68-35Mev), observed by low latitude satellite, 591

PROTONS
precipitation, satellite observations, 591
ring current, cyclotron instability, effect of cold ions and thermal anisotropy, 207
showers, from forecast geomagnetic activity, 205

PULSATIONS

HYDROMAGNETIC WAVES

RADAR

EISCAT
incoherent scatter, electric field measurement during IPDP plasma wave event, 1103
ion flows, and heating at contracting polar-cap boundary, 1229
ionospheric conductivity, electric fields and currents associated with auroral substorms, 1359
periodic mesopause echoes, features and possible relationship to geomagnetic activy 423

REACTION KINETICS
absorption cross-sections,
and oscillator strengths for Schumann-Runge bands of isotopic oxygen, $^{18}O_2$ at 79K, 1201
for oxygen in Herzberg continuum, 1469
of O_3 at 238-335nm and temperature dependence, 395
chemistry of O_3 in thermosphere and identification of OI(557.7nm) nightglow emission precursor, 1077
dissociative recombination of O_2^+, $O(^1D)$ production, 47
dissociative recombination of O_2^+, $O(^1S)$ excitation, 621
distribution, non-thermal, of $O(^1D)$ in night-time thermosphere, 89
excitation of OI(557.7nm) nightglow line, 883, 1077
excitation and quenching of oxygen bands in nightglow, 875
photodissociation, O_2,
cross sections for O_2 Schumann-Runge system, 819, 1039
parameters for Herzberg continuum, 1069
solarspectral radiances in O_2 Herzberg continuum, Schumann-Runge bands and continuum, 1059
rate coefficient for $O(^1S)$ excitation by dissociative recombination of O_2^+, 621
rate constant and branching ratio for $N_2^+ + O$ reaction, 307
recombination, ionospheric, in E and F-layers, a historical resume, 55
transition probabilities, oxygen bands, nightglow, 869

SATURN
photographic survey of northern hemisphere from 1979 to 1987, 1381

SPACECRAFT
ablation of materials in low Earth-orbital environment, 1497
aerodynamic effects on measurements of atmospheric composition from rockets in thermosphere, 921
'mother-daughter' rocket pair, electron accelerator experiment, ionospheric plasma, 1509
orbit analysis,
upper atmospheric zonal winds, 1085
COSMOS 1335, and geopotential harmonics, 449
1965-09A, and geopotential harmonics, 569
rocket electron-beam experiment, observation of plasma effects, 399
satellite observations of OI UV dayglow, 963
shuttle,
environment, role of plasma processes, 841
spacelab 1, grille spectrometer measurements of atmospheric gases, 291

SPECTROSCOPY
high resolution, oxygen in U.V. airglow, 927

SUN
solar flares, associated with interplanetary disturbances, 669
solar wind,

flow characteristics in sector boundaries between 0.3 and 1.0au., 1025
particle flux density, solar activity, 1343
plasma, geomagnetic activity and proton showers, 205
plasma, heat conducting, MHD waves and instabilities, 775
speed, heliographic structure, spacecraft observations, 1329
sporadic phenomena, effectiveness for producing magnetospheric perturbations, 1015
transients and interplanetary shocks, solar origin, 301
sunspots, Yule analysis, a & e examination, relationship to auroral phenomena, 99

TIDES

see ATMOSPHERE, TERRESTRIAL, motions

URANUS
bow shock, observations of energetic particles by Voyager 2 spacecraft, 311

VENUS
heating efficiencies in thermosphere, 37
VLF bursts in night ionosphere, effect of magnetic field, 1211

WINDS

see ATMOSPHERE, TERRESTRIAL, motions
